

Page 1 — S&P 500 Dashboard

Visual 1 — Summary Stats Banner

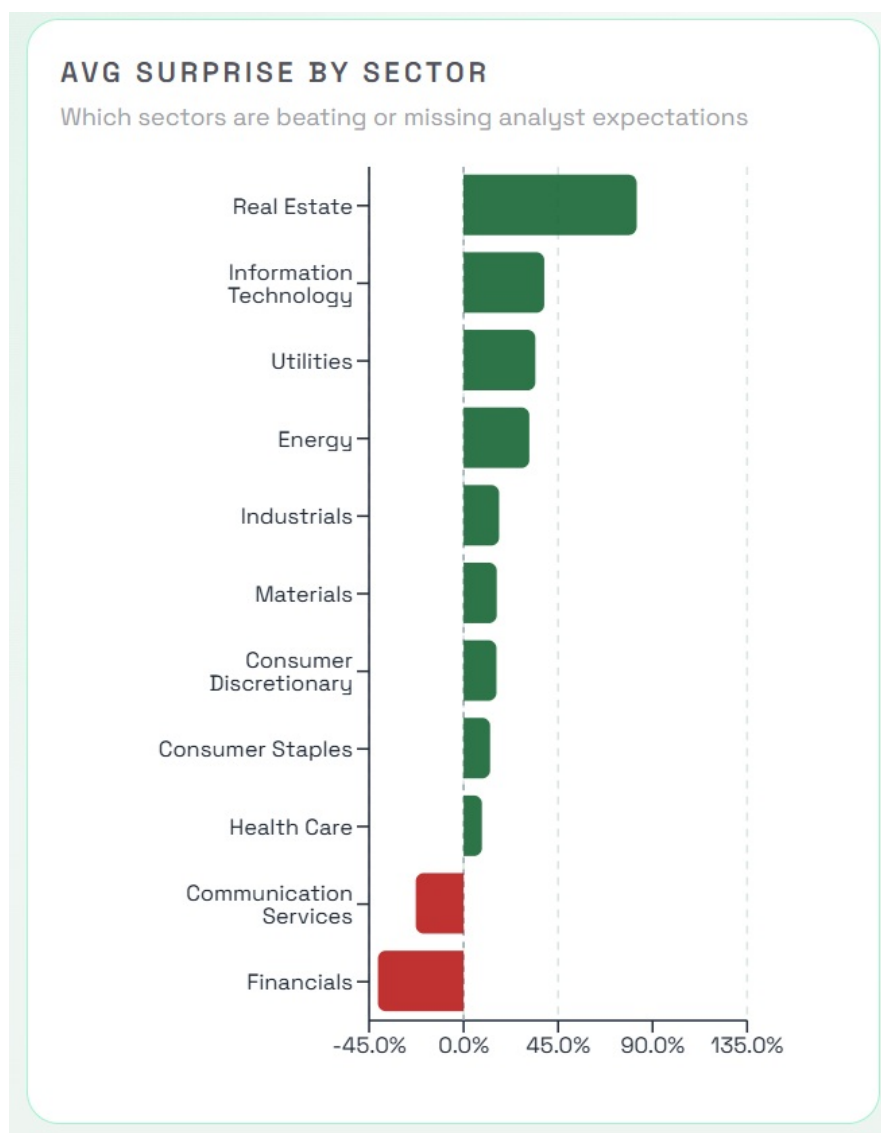

A five-cell KPI ribbon that appears at the top of the dashboard. Each cell is a card rendered in a responsive CSS grid (2 cols → 3 cols → 5 cols).

Field	Colour Logic
Companies Analyzed	Neutral — text-foreground
Beat Estimates	Green — text-positive
Missed Estimates	Red — text-negative
Avg Beat Magnitude	Green — text-positive
Avg Miss Magnitude	Red — text-negative

Visual 2 — Sector Surprise Bar Chart

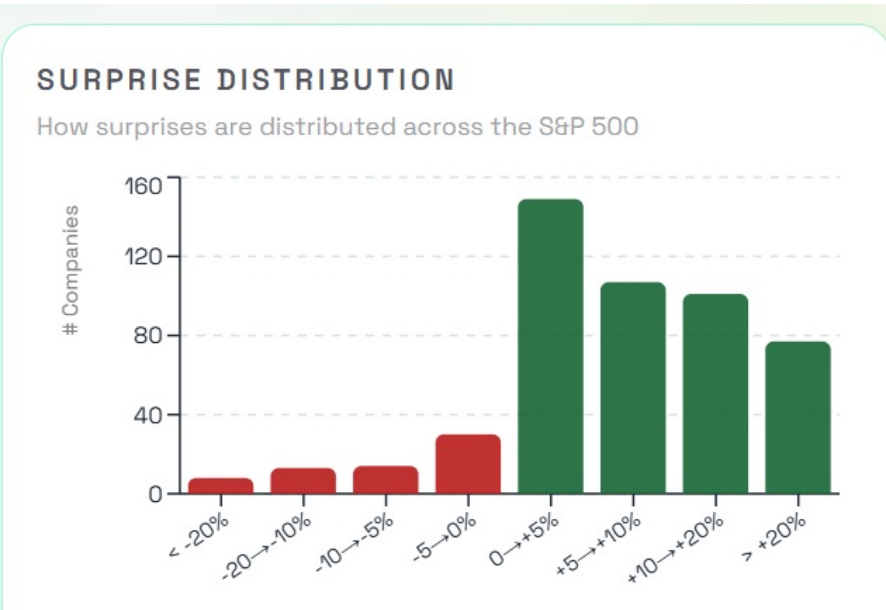

A **horizontal bar chart** showing average EPS surprise per GICS sector, sorted by magnitude. Clicking a bar filters every other chart on the page to that sector.

Feature	Detail
Bar colour	Green (#166534) for beats · Red (#b91c1c) for misses
Selected state	Active sector: full opacity + emerald border · Others: 22% opacity
Reference line	Dashed vertical line at x = 0
Tooltip	Shows sector name, avg surprise %, company count
Interaction	onClick → filters dashboard to that sector

Visual 3 — Surprise Histogram

A **vertical bar chart** showing the distribution of all S&P 500 EPS surprises across 8 fixed buckets. Clicking a bucket filters the card list below.

Bucket range	Bar colour
Negative buckets (< 0%)	Red #b91c1c
Positive buckets (≥ 0%)	Green #166534

Feature	Detail
Buckets	8 fixed ranges: < -20% through > +20%
Selected state	Active bucket: full opacity + border · Others: 22% opacity
X-axis labels	Angled –35° to avoid overlap
Tooltip	Shows bucket label + count with company / companies pluralisation
Interaction	onClick → filters the card list to that surprise range

Visual 4 — Surprise vs. Reaction Scatter Chart

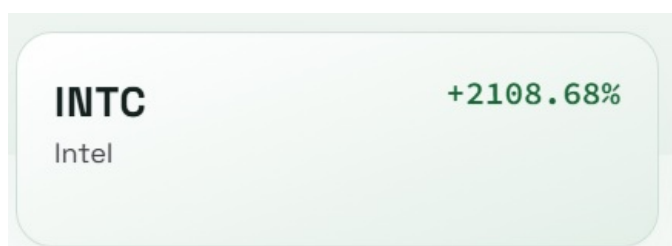

A **scatter chart** plotting every S&P 500 ticker — EPS surprise % on the X-axis against 3-day CAR % on the Y-axis. Each dot is colour-coded by GICS sector.

Feature	Detail
Sector colours	11 unique colours; SECTOR_COLORS map keyed by GICS sector name
Reference lines	Dashed grey lines at $x = 0$ and $y = 0$, forming four quadrants
Custom dot	Each dot rendered as <code><circle></code> with sector colour fill
Tooltip	Shows ticker, company name, sector (in sector colour), surprise %, CAR %

Visual 5 — Surprise Card

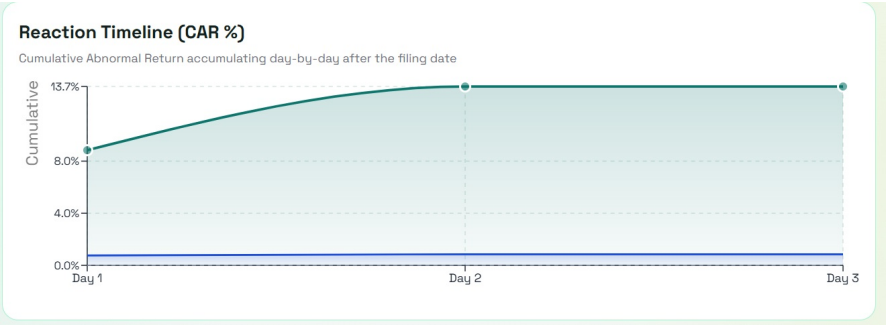

Each company in the filtered list is rendered as a clickable card. Clicking navigates to the ticker detail page with filing date and sector pre-filled in the URL.

Page 2 — Ticker Detail Page

Visual 6 — Reaction Timeline Area Chart

A **dual-area chart** showing cumulative returns over the 1–3 trading days after an earnings filing. Two shaded areas are drawn on the same axes — the ticker’s total return and the SPY market return — so the gap between them is the visible CAR.

Element	Style
Ticker area	Teal stroke #0f766e · Gradient fill 35% → 5% opacity
SPY area	Blue stroke #1d4ed8 · Gradient fill 32% → 6% opacity
Ticker dots	Filled circle r=5, white stroke; active r=7
Reference line	Dashed grey at y = 0
Tooltip	Shows date, cumulative ticker returns, cumulative market returns, cumulated actual reaction (coloured by sign)

Visual 7 — Regression Scatter Chart

A **composed chart** showing the sector’s linear regression model. All (surprise z-score, CAR) data points for the sector are plotted; the fitted regression line is drawn through them. Two highlighted reference dots show where this specific ticker sits — expected CAR (dark green) and actual CAR (blue).

Combined Proportionality Reaction Chart

A **composed chart** that overlays the regression line with two labelled ReferenceDot markers — one for expected CAR and one for actual CAR — with floating pill-style labels showing the percentage values.

Element	Style
Regression line	Red #dc2626, strokeWidth 3
Expected CAR dot	Dark green #065f46, r=7, pill label above/below
Actual CAR dot	Blue #2563eb, r=7, pill label above/below
Pill labels	White rect with rounded corners, coloured text, positioned above or below dot depending on which is higher
X domain	Auto-centred around ticker's z-score ± configurable half-range

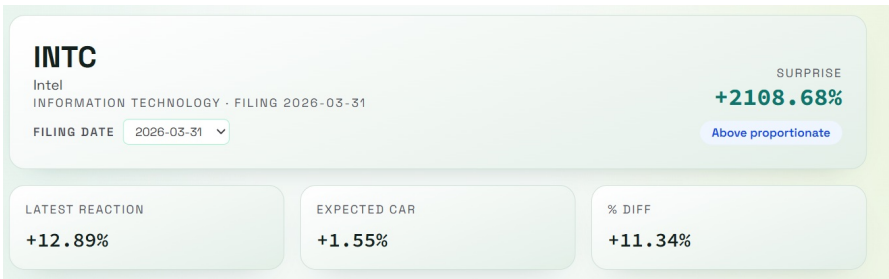

Element	Style	Purpose
Regression line	Red #dc2626, 40-point polyline	Sector expected-CAR model
Sector data points	Black dots	All (z-score, CAR) pairs used to fit the model
IQR outlier points	Grey / dimmed	Excluded from fit, shown for transparency
Expected CAR dot	Dark green #065f46, r=7, white ring	Where sector model predicts this ticker's CAR

Actual CAR dot	Blue #2563eb, r=7, white ring	What the market actually did
Hover interaction	activePoint state toggles tooltip card	Inspect expected vs. actual values

Supporting Visual Elements

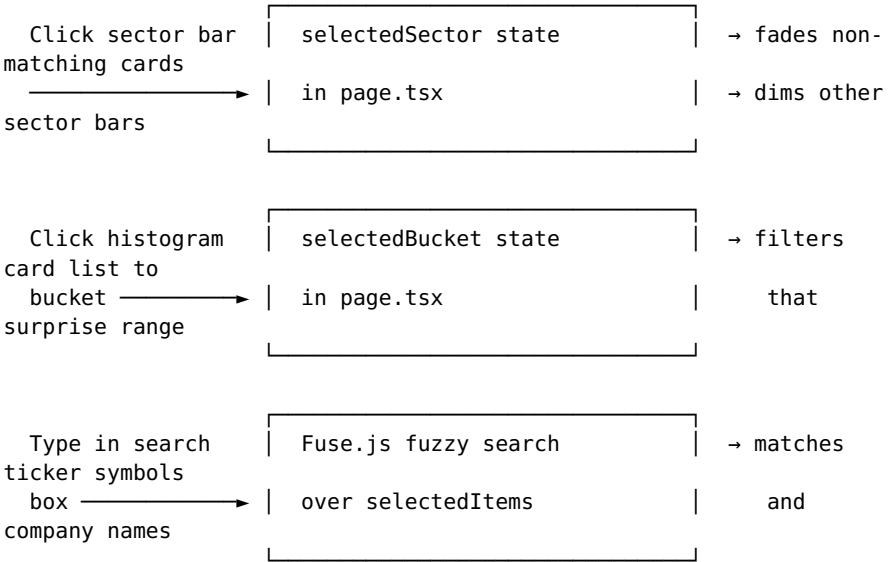

Visual 8 — Proportionality Gauge

A minimal metric card displaying the proportionality deviation value

Interactive Filtering System

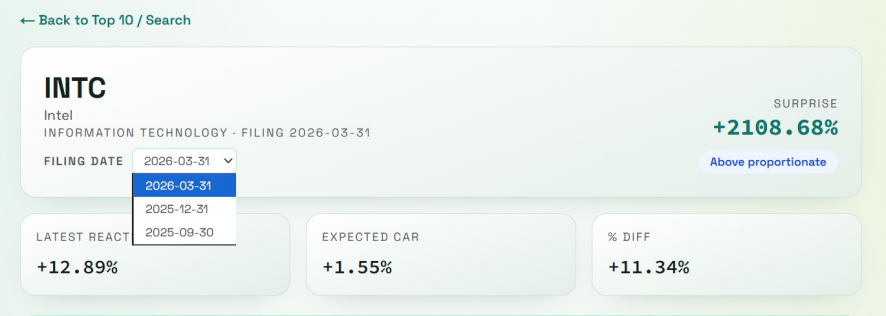

The dashboard charts are wired together — clicking one visual filters all others:

Sector filter and histogram filter compose: both can be active simultaneously, narrowing the visible card list to companies that satisfy both conditions.

Filing Date Selector (Ticker Detail)

A dropdown on the ticker detail page lets the user switch between earnings seasons without a full page reload. Changing the selection updates the URL and re-fires all three data fetches in parallel.
